

500 Error - bad mySQL query

Posted by pjbauer - 2012/03/12 16:45

500 - JDatabaseMySqlI::query: 1054 - Unknown column 'browser' in 'where clause' SQL=DELETE FROM wxyz_joomlawatch_uri WHERE browser is not NULL and fk
Doing a text search I see there 2 queries that reference the 'browser' field in class.joomlawatch.visit.php

No such field exists.

In JoomlaWatch-1.2.18-PRO-Joomla-UnzipFirst.zip - the sql code does not add this field to the #__joomlawatch_uri table.

Should this be the #__joomlawatch_history table instead?
