

Article logging per user

Posted by user3344 - 2011/11/28 05:07

Hello,

I'm wondering if the following is possible with joomlawatch :

I'm building a joomla (1.7) intranet for our company with only registered users.

Is it possible to log when a user has read (or opened) an article?

The purpose for this is that our manager could check who has read a certain article and who didn't.

=====
