

Getting unrelated keywords in my reports...

Posted by user3353 - 2011/12/02 17:15

Hello,

I am a Joomla version 1.6.3 user running JoomlaWatch version 1.2.14. One of my email reports for the website I manage listed unrelated keywords and keyphrases under "Keywords" and "Keyphrases." I have no idea where these keywords come from, since they aren't in the website's meta tags and aren't related to anything on the site. Where should I go in order to fix this? Is this reason to believe that the site's been hacked? Is this an issue unrelated to Joomla or JoomlaWatch? Thank you in advance.
