

guests online adding up instead of real time

Posted by user713 - 2008/05/07 10:41

Hi,

On the second day of running JoomlaWatch I have logged into the admin to see the stats and there seems to be something wrong.

The guests online part says....

378 We have guests online (we definitely don't)

The guests online is adding up all visits to this total instead of showing whos on line in real time.

It seems to be counting page views instead of guests?

Thanks for any help

Clive

Hi, the first number is a visit counter.

And then follows the message about guest and visitors. (We have guest online means you have ONE guest online).

Regards,

Matto
