

How to exclude module?

Posted by user776 - 2008/06/01 01:36

I have an Ajax Shoutbox on my frontpage that just loads the JoomlaWatch database up with data (every few seconds when the Shoutbox refreshes). Is there anyway to exclude my Shoutbox module so that its stats aren't logged?

Hmm, nice idea!
There can be a list of URL that will be excluded from stats.
I'm working on 1.2.7, so it will be there! :) Just be patient

Regards,

Matej Koval

Is it working now? Can we exclude an URL from stats?
