

ip2c data from MaxMind

Posted by cropu2 - 2009/09/17 20:02

Hi,

(Thanks to CodeGravity for JoomlaWatch. Excellent Plugin. My fav so far)

Having installed 1.2.9 yesterday i noticed to country database was quite out of date.

I already use mindmax GeoLite database for other purposes so I thought I'd upload their database into JoomlaWatch. Worked first time and seemed more accurate (all IP received a country code whilst that shipped with JoomlaWatch had gaps).

So, question is, has anyone found IP-to-country database to be less accurate than MaxMind? Or perhaps there's a more accurate database out there?

Many thanks

CroMan2
