

JoomlaBug - subdirectory bug

Posted by robo1999 - 2010/04/17 09:22

I installed JoomlaBug in subdirectory and all the images / icons are not available.
The image path is incorrect, it omits the subdirectory.

Instead of:

`yourdomain.com/sub/components/com_joomlabug/img/joomlabug-logo-64x64.png`

there is:

`yourdomain.com/components/com_joomlabug/img/joomlabug-logo-64x64.png`

Thanks,
Robo
