

This component just doesn't work

Posted by thedroop - 2008/09/11 06:17

Using the latest Joomla, I never could get 1.5.6 to work, just got errors

now I just installed 1.5.7 & now when I select "show the 1 x 1 icon" that never shows, just the text

when I access the joomlawatch page "Loading visits..." is all I ever see

ive had nothing but problems with this, does anyone know why?
